Client and parent role in pain management

Your child's team is here to help with their pain management. Your child's pain will be assessed on admission and throughout their stay as their pain level and medication needs may change during their rehabilitation.

How you can help:

- Share with your team how you think your child is doing with their pain management plan.
- You know your child best; there are many reasons why your child may have pain and you can help explain this to the team.
- Know who your team members are - their names and phone numbers are posted beside your child's bed.
