

# More to rehab than therapy

We can help the transition from hospital to home

## Conventional Therapy & Medical Support

includes PT, OT, SLP, SW, psychology, Child Life, Child & Youth Workers, physician and nurses

Nursing will provide daily care

Your PT, OT, SLP and seating team will assess and trial equipment

Your team will meet with you to discuss discharge and plans to transition home

## Integrative Therapy

refers to therapeutic recreation, music therapy, art therapy and school

Your child may be referred to art, music and recreation therapy

If able, your child may have short blocks of school

Check out the Activity Board for open programming

What does rehab involve?

## Parent Involvement

includes parent support, coping tools and education for family members and community partners

Social workers will provide regular support

Your team will set up local community resources to assist you at home and school.

Practice spending time at home on weekends

## Reintegration & Socialization

refers to adaptive equipment, rest and social time as needed

The team will provide ongoing education

You may find that your child needs breaks throughout the day

Fill downtime with activities that your child enjoys to make your time meaningful
